

Industrial Drum and Container Heaters

Perfectly fitting - reliable - energy efficient - robust

Want to control the temperature of your vessels easily and safely?

Freek offers a wide range of standard models — as well as customised special designs.

The chemical, pharmaceutical and food industries use substances on a daily basis that must be stored or processed under defined thermal conditions. Drum and container heaters have been developed specifically for these applications and guarantee optimum temperature profiles for liquids and solids. Their simple installation and ease of use increase process reliability and processing speed.

For constant heating we recommend energy-efficient, insulated heating jackets and drum bottom heaters. Our powerful silicone drum heaters are suitable for cyclical processes and rapid heating.

Your **benefits** at a glance

- Standard sizes available from stock
- Easy to attach with buckles or springs
- Resistant to mechanical stress
- All heaters have an adjustable thermostat
- Optionally available with digital controller with display
- Delivered ready to connect with plug
- Can be operated without special training
- Customised solutions for your requirements

Application example: **Quick emptying of a drum containing solidified fat**

Requirement:

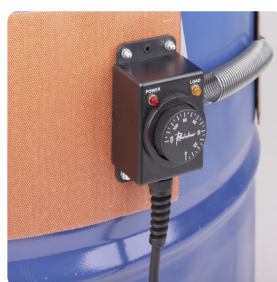

- Complete emptying of a drum instead of time-consuming cleaning
- Quick heating of solidified fat to 65 °C for emptying the drums
- Previously, an insulated heating jacket with 1800 W was used

Our solution:

- 3 silicone drum heaters HSSD 1500 W across the height of the drum
- 1 base drum heater HBD 900 W
- Heating of the entire drum contents in 80 min → saving 110 min

Typical Applications

- Food industry
- Pharmaceutical industry
- Chemical industry
- Beekeeping
- Construction industry
- Oil and gas industry
- Cosmetics industry
